The background of the slide is a light beige color with a subtle gradient. It is decorated with numerous butterfly silhouettes of various sizes and orientations. Most of the butterflies are white, but one butterfly in the bottom right corner is a distinct reddish-brown color. The butterflies are scattered across the page, with some appearing more prominent than others.

2.3

Measures of Central Tendency

Measure of Central Tendency

- A value that represents _____
entry of a _____

1)

2)

3)

○ Mean _____ - the _____ of the data entries _____ of entries

○ Formula:

○ Advantages:

○ _____ - means of different samples of the same population

○ Takes into account _____

○ Disadvantage:

○ _____

○ Median – _____ when data is arranged _____

○ _____ number of data entries – median is the _____

○ _____ number of data entries – median is the _____

The background of the slide is a light beige color with a pattern of butterfly silhouettes. Most of the butterflies are white, but there is one prominent red butterfly in the bottom right corner. The butterflies are scattered across the page, some larger and more detailed, others smaller and fainter.

● Mode – the value that _____

● Bimodal – _____

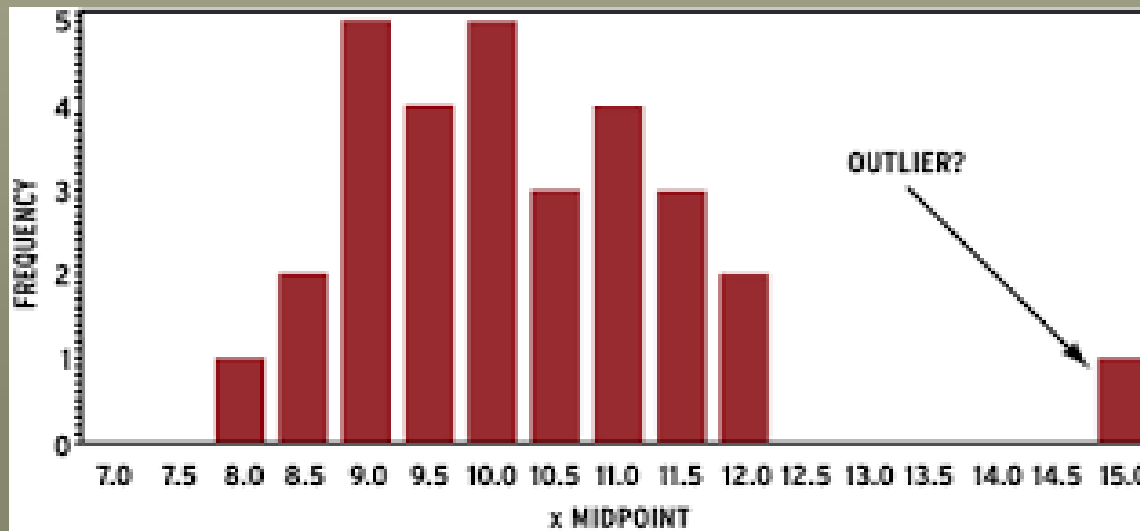

● Multimodal – _____

● _____

Critical Thinking

- Always consider whether or not the calculated _____

 - Do they really _____
- May be affected by _____ – data entries that are _____ from the rest of the data
 - Outliers cause _____

EX:

- Find the mean, median, and mode of the data, if possible. If any measure of center cannot be found or does not represent the center of data, explain why.
- **Prices (in dollars) of basketball shoes**
70, 130, 80, 20, 100, 120, 125, 90, 20, 145

Weighted Mean

- Computed when data values are _____

- EX:

- EX:

- Formula:

EX:

- You are taking a class in which your grade is determined from 5 sources: 50% from your test mean, 15% from your midterm, 20% from your final exam, 10% from lab work, and 5% from homework. Your scores are 86 (test mean), 96 (midterm), 82 (final exam), 98 (lab work), and 100 (homework). What is the weighted mean of your scores?
- The minimum average for an A is 90. Did you get an A?

Mean of a Frequency Distribution

- 1) Find the _____ of _____
- 2) Find the _____ of the _____ of the _____.
- 3) Find the _____.
- 4) Divide _____.

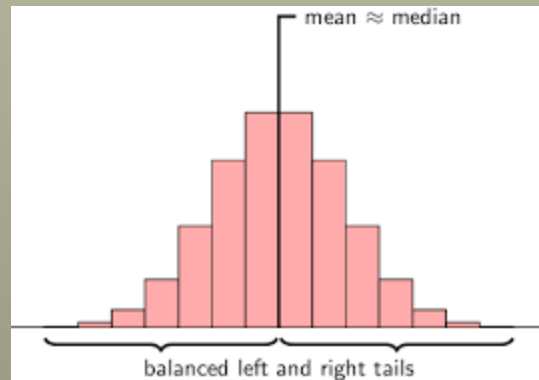

EX: Find the mean of the frequency distribution.

| Class | Frequency |
|--------|-----------|
| 41-50 | 1 |
| 51-60 | 2 |
| 61-70 | 6 |
| 71-80 | 8 |
| 81-90 | 14 |
| 91-100 | 9 |

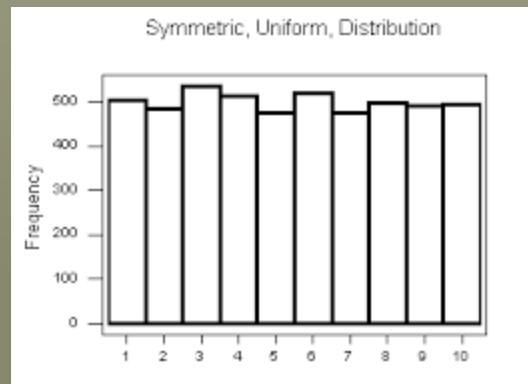

Shapes of Distributions

○

○

- Skewed – distribution of data is _____ and _____ than to the _____
- Skewed to the _____
 - Longer left tail
 - Mean and median are to the left of the mode
- Skewed to _____
 - Longer right tail
 - Mean and median are to the right of the mode

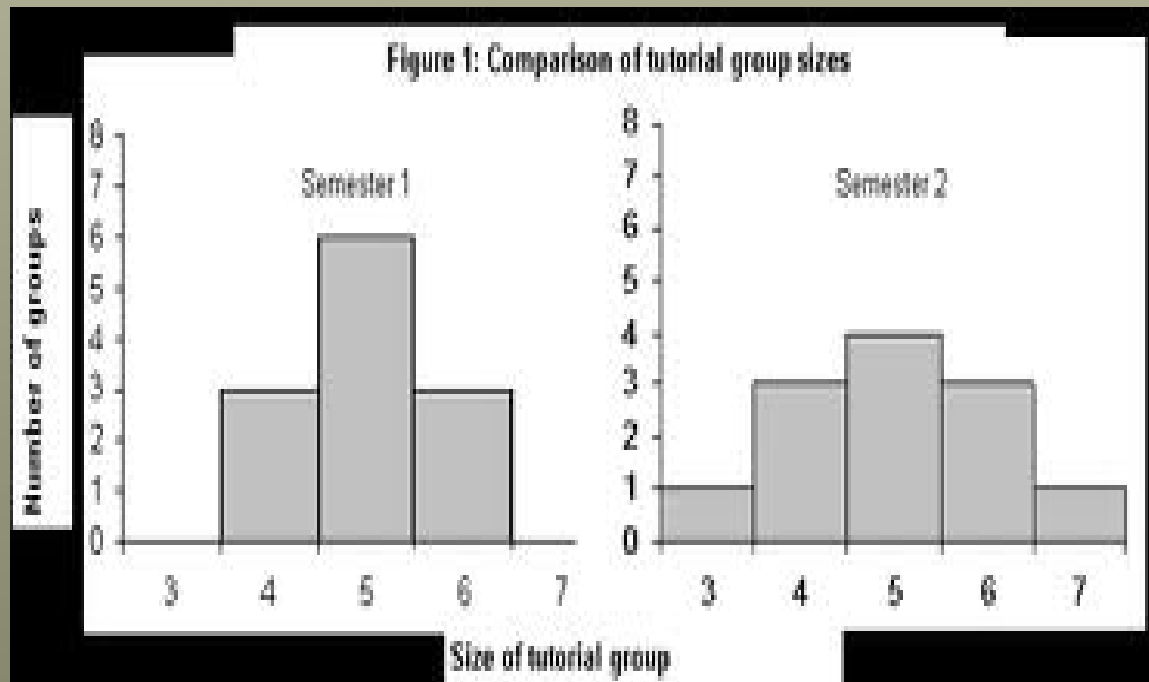

3.3

Measures of Variation

Measures of Variation

- How far the data is _____

Ways to Measure Variation:

- **Range :** _____

- **Advantage:**

- **Disadvantage :**

○ **Deviation** – the _____ between a
_____ and the _____

○ EX:

○ The sum of all deviations in a data set is always 0

○ EX:

○ **Standard Deviation (s):** measure of variation of _____ from the _____

○ Represents _____ data is from the _____

○ Can be _____

○ _____

○ Outliers _____

○ Can be used to compare the variation of data in different sets if the units are the same and if the means are approximately the same

○ EX:

To Find Standard Deviation

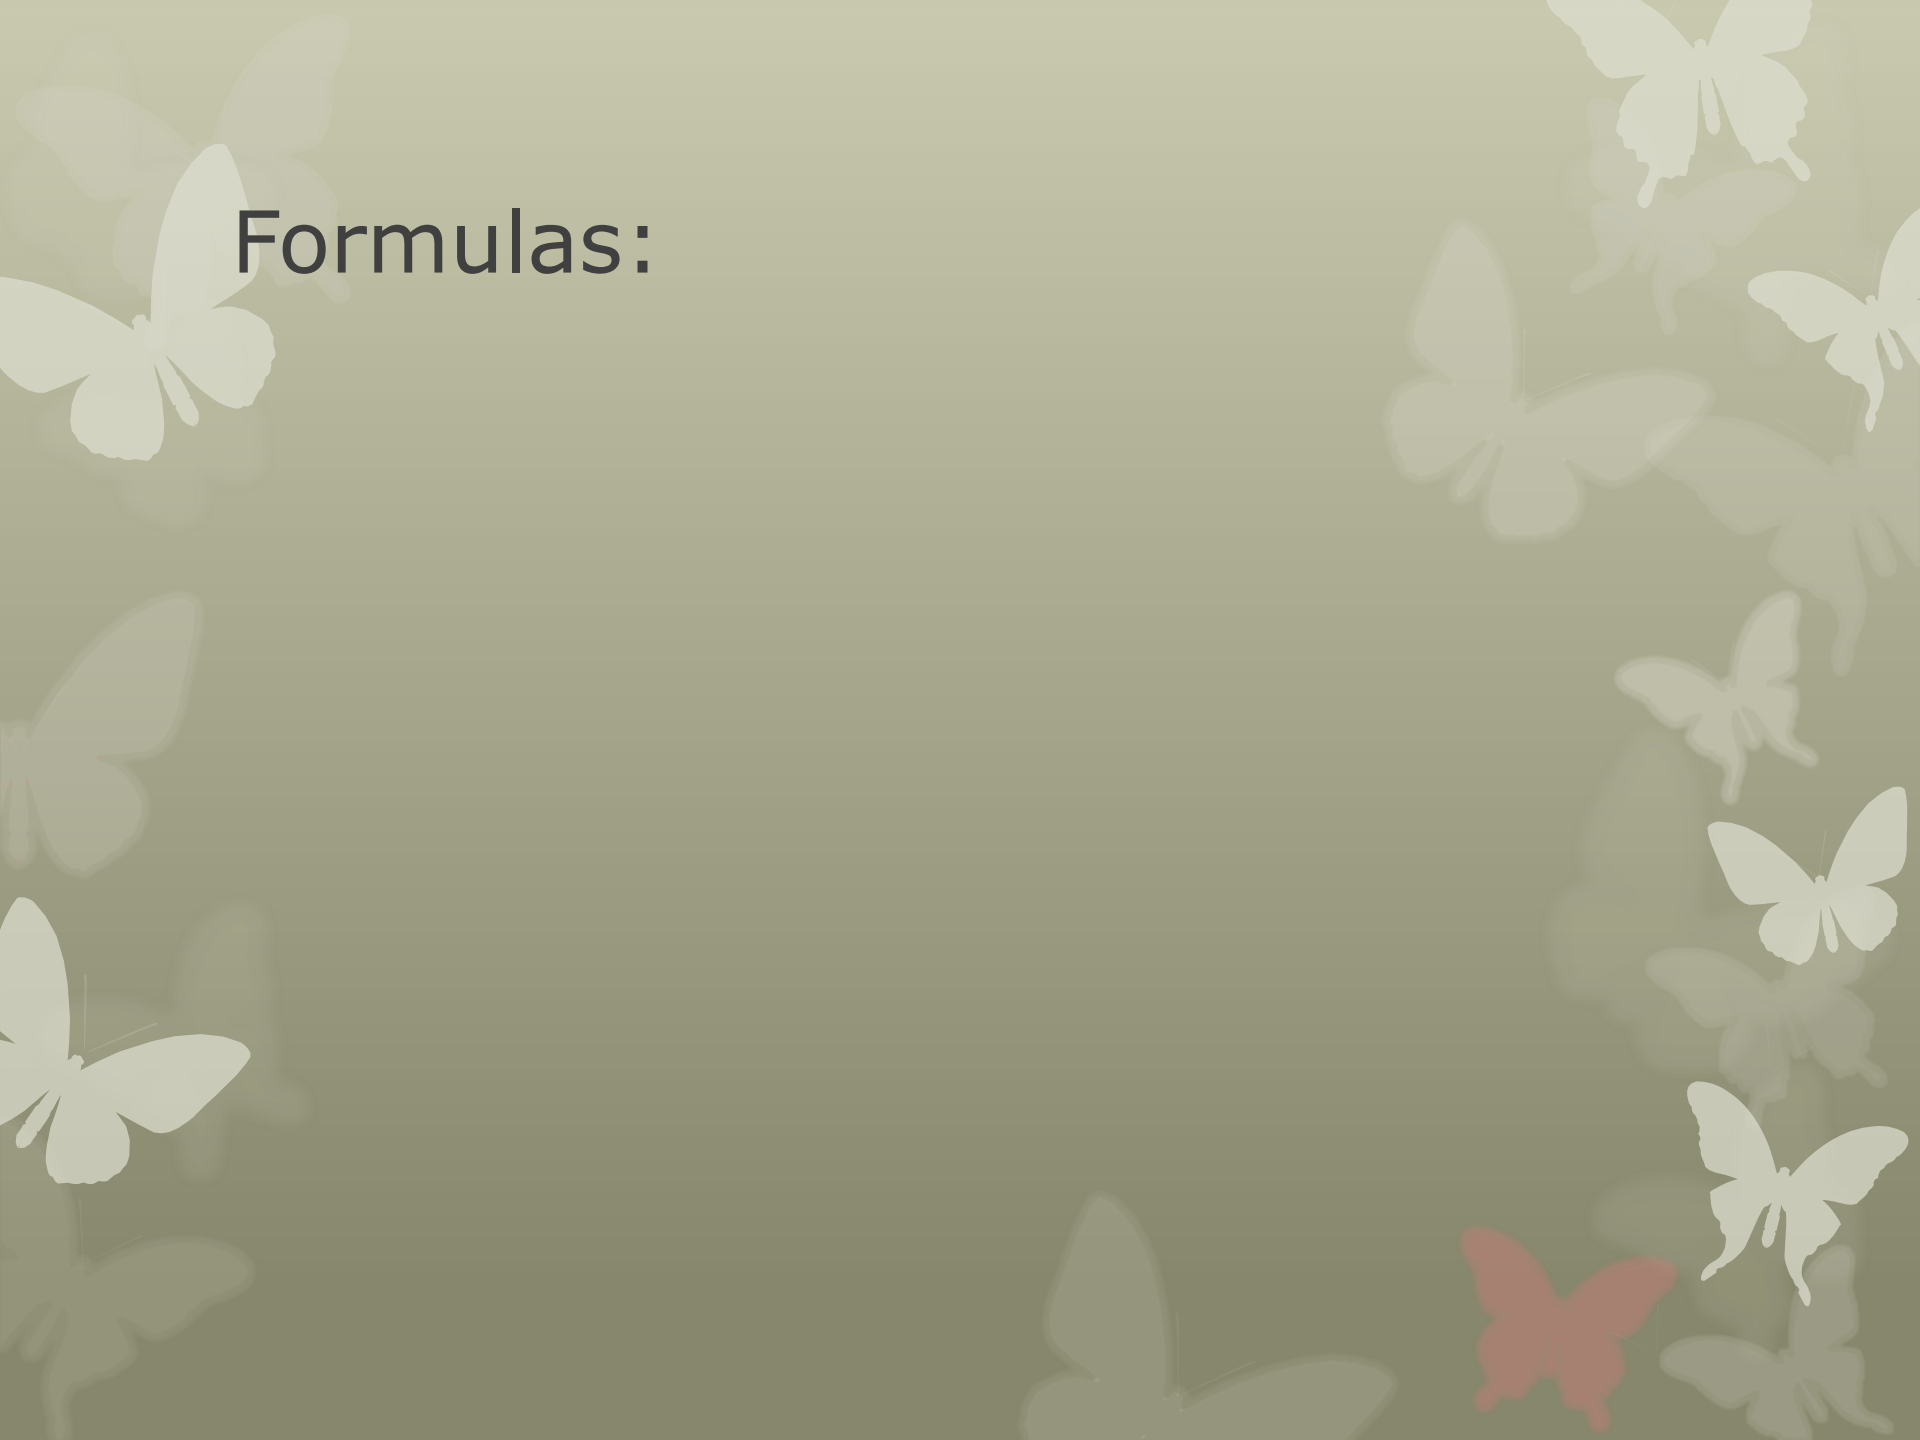

- **For a Population:**

- 1) Find the _____ of the data set
- 2) Find the _____ of each entry
- 3) _____ each deviation
- 4) _____ all the squares
- 5) Divide by the _____
- 6) Take the _____

- **For a Sample :**

- Everything is the same, except divide by _____ in step 5

Formulas:

The background of the slide is a light beige color with a pattern of butterfly silhouettes. Some butterflies are white, some are light grey, and one in the bottom right corner is a reddish-brown color. The butterflies are scattered across the page, some larger and more prominent than others.

● NOTE:

● The step _____ is called the **population** or **sample** _____.

● This measure of variation may not be very useful or commonly used since its _____ of the original units

● Taking the square root in the last step _____ the original units, thus making _____ a better measure of variation

EX: Find the range, mean, variance, and standard deviation of the population data set

- Salaries (in thousands) for Skyline Elementary teachers
- 41, 38, 39, 45, 47, 41, 44, 41, 37, 42

EX: Find the range, mean, variance, and standard deviation of the sample data set

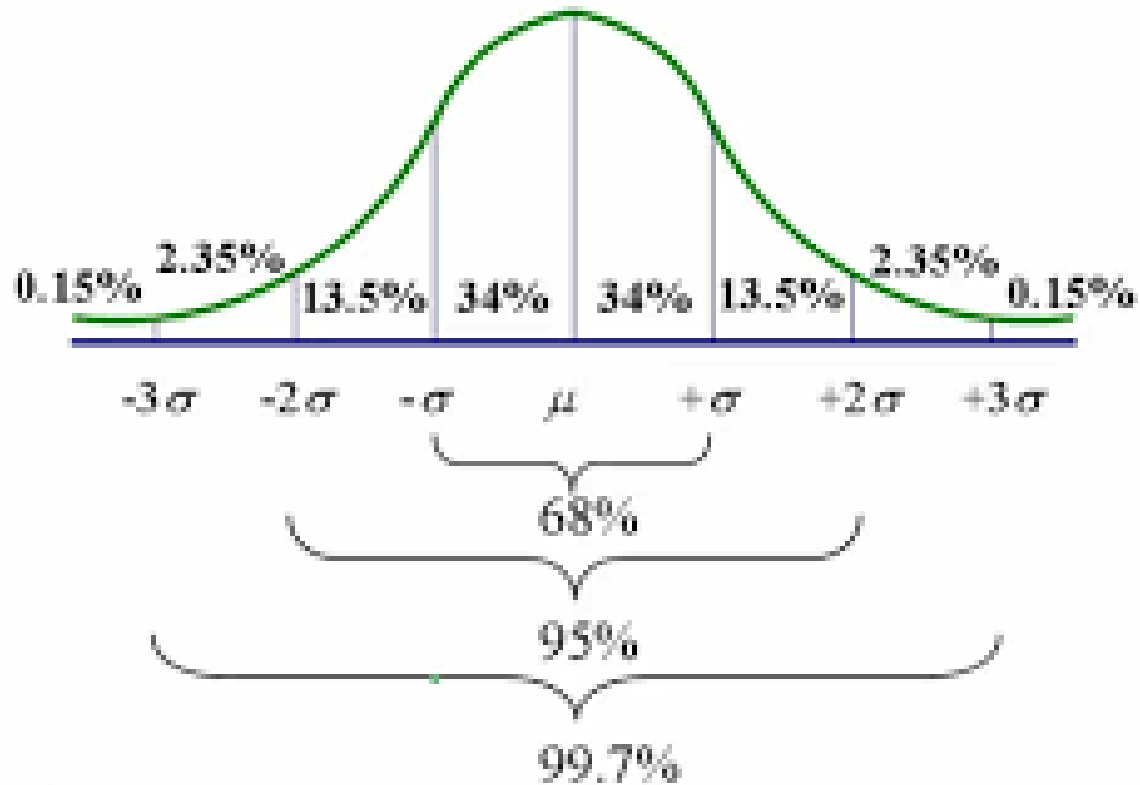

- Recovery time (in days) for high school football players that suffered concussions
- 4, 7, 6, 7, 9, 5, 8, 10, 9, 8, 7, 10

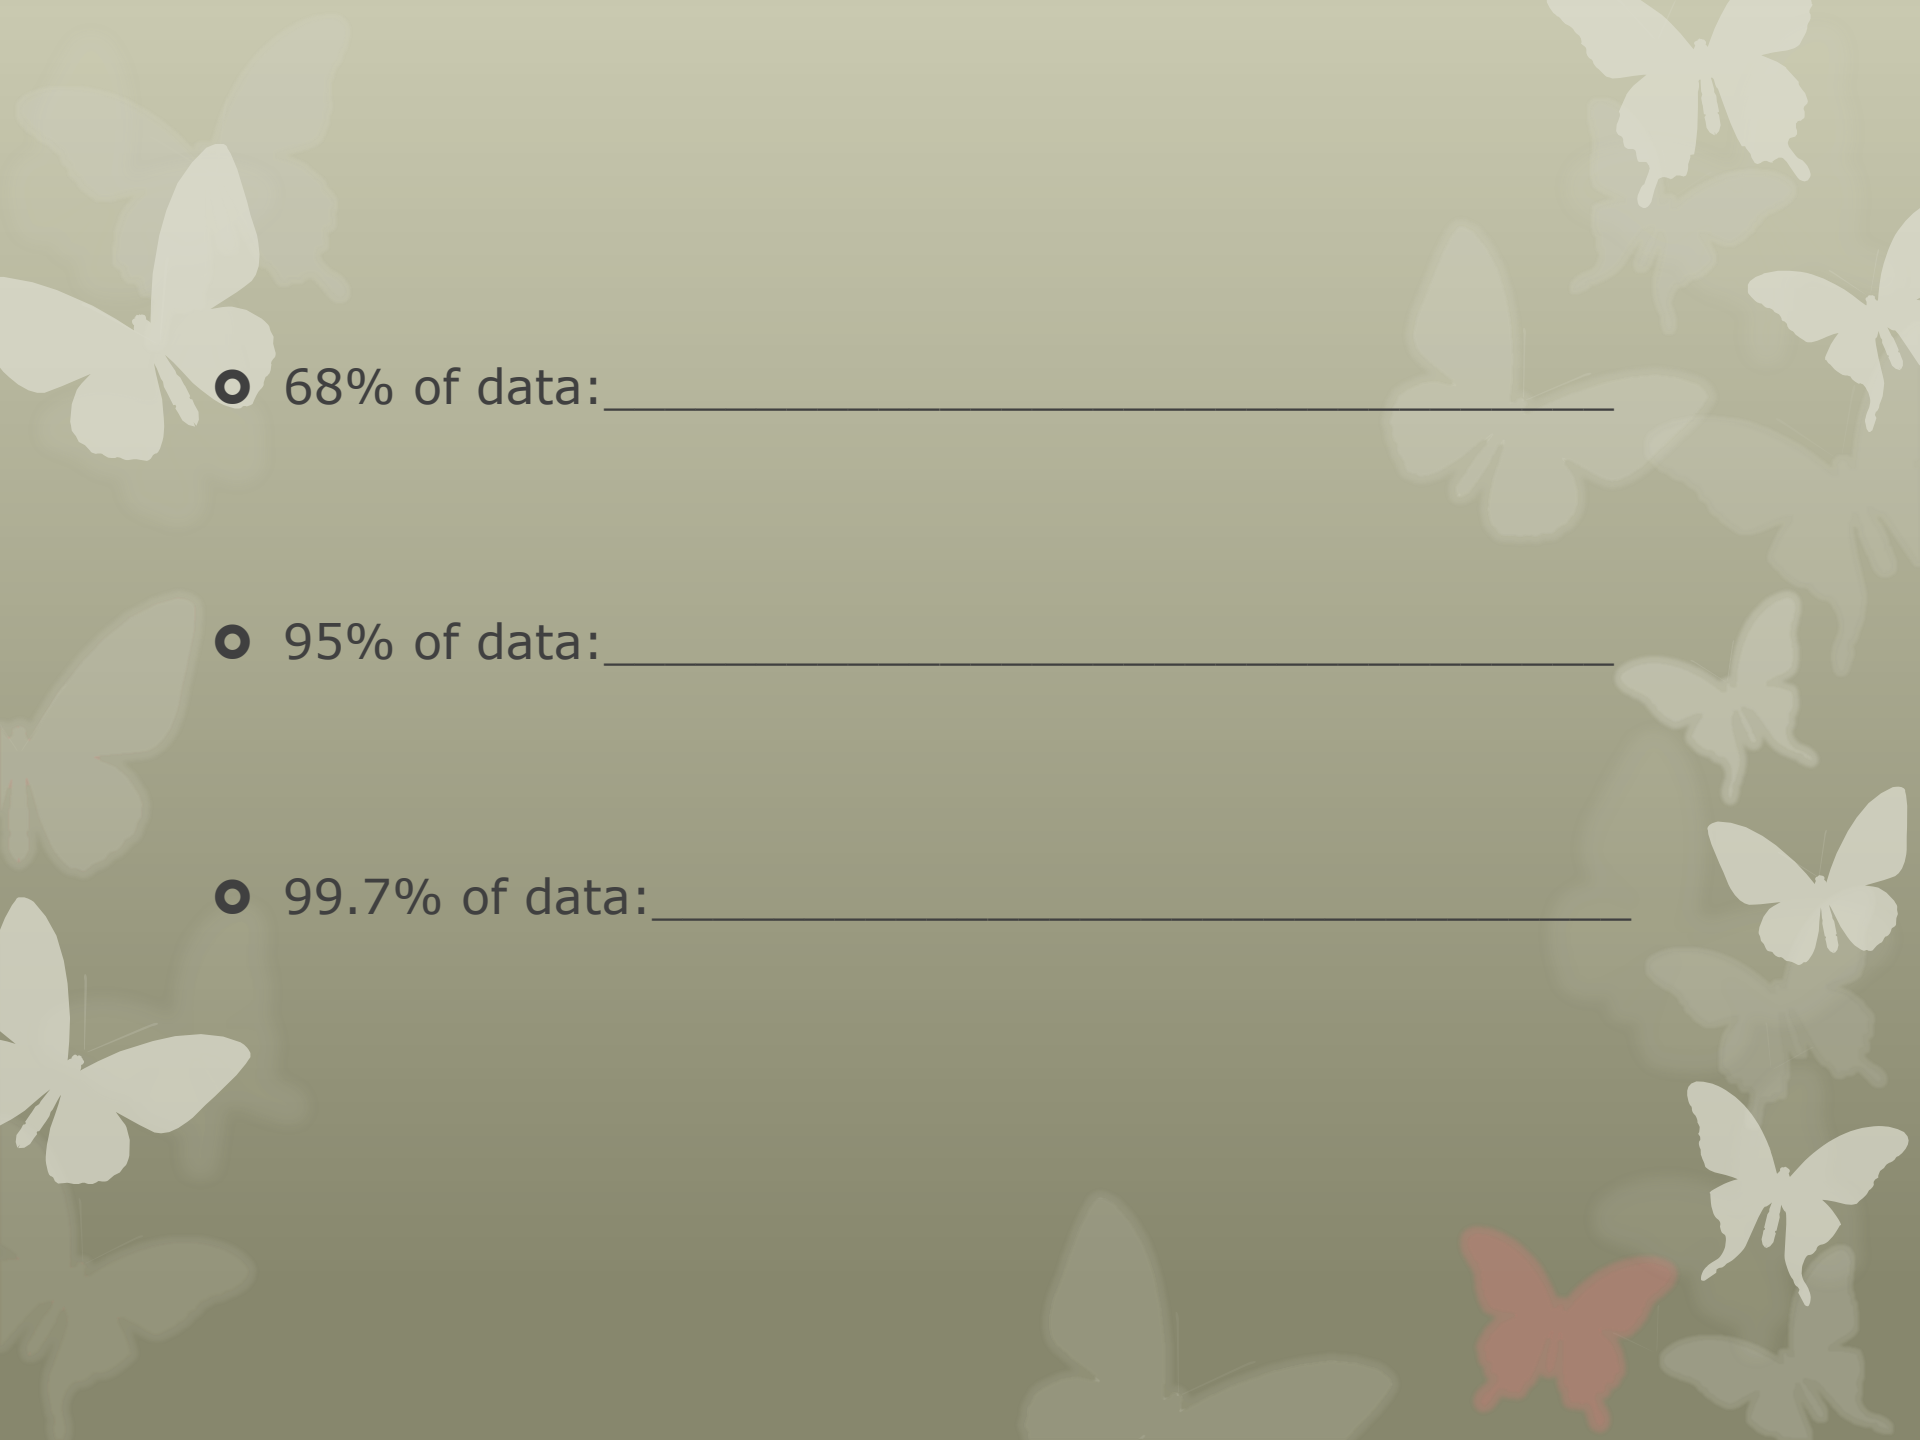

Usual and Unusual Values

- Values that lie _____
from the mean are considered _____
- Values that are _____
from the mean are _____
- Values that are _____
from the mean are _____

Empirical Rule (or 68-95-99.7 Rule)

The background of the slide is a light beige color with a pattern of butterfly silhouettes. Most of the butterflies are white, but there is one prominent red butterfly in the bottom right corner. The silhouettes are scattered across the page, some overlapping.

● 68% of data: _____

● 95% of data: _____

● 99.7% of data: _____

EX:

- In a survey conducted by the National center for Health Statistics, the sample mean height of women in the United States (ages 20-29) was 64.2 inches, which a sample standard deviation of 2.9 inches. Estimate the percent of women whose heights are between 58.4 inches and 64.2 inches.

Coefficient of Variation

- Used to _____ different sets of data with _____
 - EX: Heights and Weights
 - Expressed as a _____
 - The _____ the _____
_____ to the data set
- Formula:

EX:

- The table shows the heights (in inches) and weights (in pounds) of a basketball team. Find the coefficient of variation for the heights and weights. Then compare the results.

| Heights | Weights |
|---------|---------|
| 72 | 180 |
| 74 | 168 |
| 68 | 225 |
| 76 | 201 |
| 74 | 189 |
| 69 | 192 |
| 72 | 197 |
| 79 | 162 |
| 70 | 174 |
| 69 | 171 |
| 77 | 185 |
| 73 | 210 |

The background is a light beige gradient with several white butterfly silhouettes scattered across it. One butterfly in the bottom right corner is colored red.

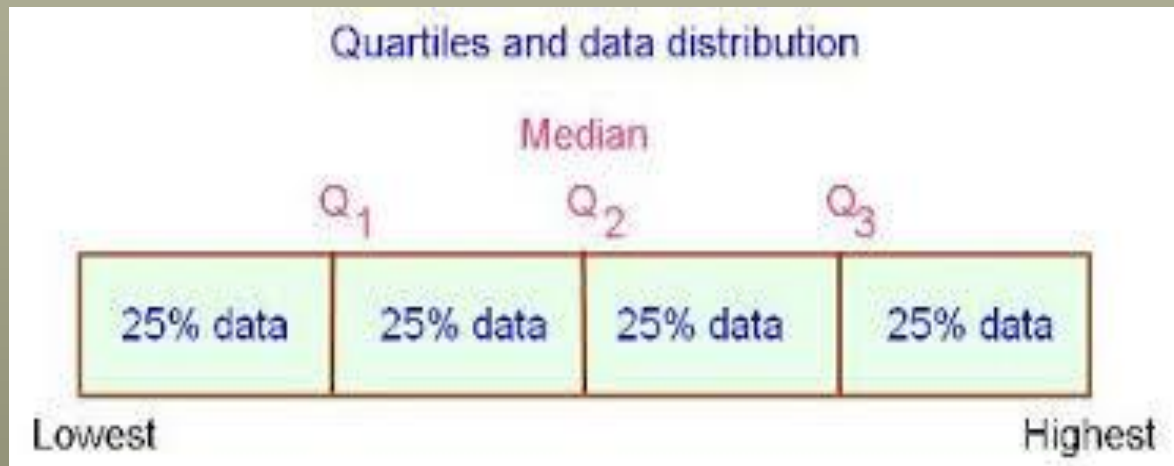

2.5 Measures of Position

Fractiles

- Numbers that _____ an ordered data set into _____
- Used to show the _____ of a data entry within a data set
 - 1)
 - 2)
 - 3)

Quartiles

- Divides data into 4 equal parts

- **Interquartile Range (IQR)** – shows the spread of the _____ of the data

- IQR =

● Using the IQR to Identify Outliers

- 1) Find _____
- 2) Find the _____
- 3) Multiply the IQR _____
- 4) _____ the result from step 3 from Q1
 - Any data entry _____ is an outlier
- 5) _____ the result from step 3 to Q3
 - Any data entry _____ is an outlier.

EX: Find the quartiles, the IQR,
and identify any outliers.

- 56, 63, 51, 60, 57, 60, 60, 54, 63, 59, 80, 63, 60, 62, 65

5-Number Summary

- Important features of a data set:

Boxplot (Box-and-whisker plot)

- Graph of data displaying the 5 point summary

To Construct a Boxplot:

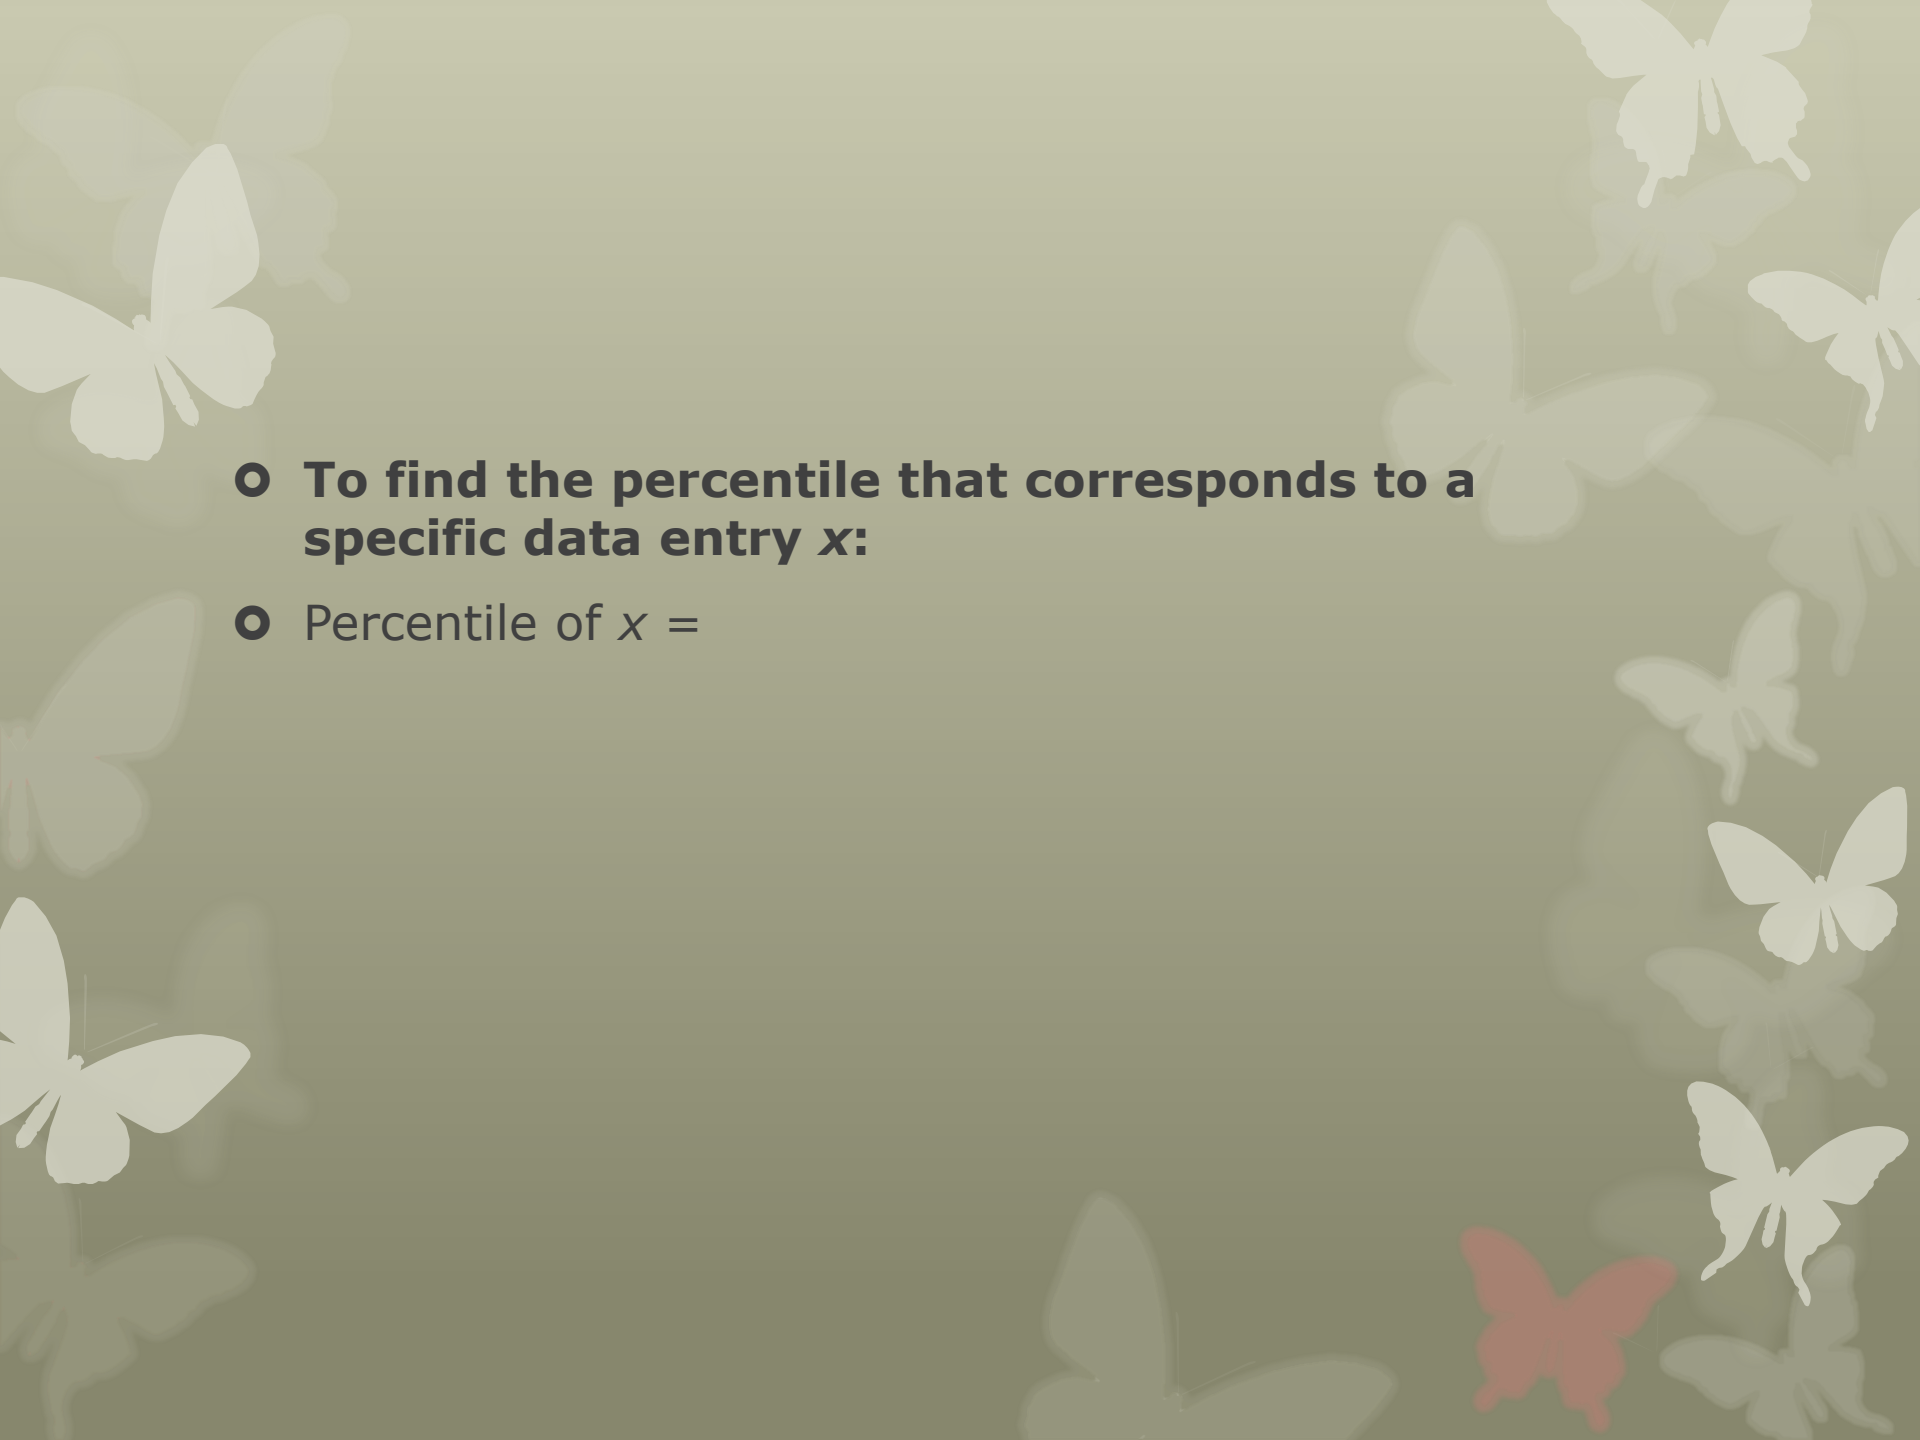

- Find the _____
- Construct a scale that includes _____
- _____ extending from Q1 to Q3 with a line drawn in at Q2.
- _____ from the box to the min and the max

EX: Find the 5 point summary
and construct a box and whisker
plot.

- 39, 36, 30, 27, 26, 24, 28, 35, 39, 60, 50, 41, 35, 32, 51

Percentiles

- Divide data into _____.
- Often used in _____ related fields to indicate how _____ compares with _____.
- EX:

- 
- The background of the slide is a light beige color with a pattern of butterfly silhouettes. Most of the butterflies are white, but one butterfly in the bottom right corner is a solid red color. The butterflies are scattered across the page, some overlapping.
- **To find the percentile that corresponds to a specific data entry x :**
 - Percentile of $x =$

EX: Find the percentile that corresponds to \$30,000.

- Tuition costs (in thousands of dollars) for 25 universities.

44, 30, 38, 23, 20, 29, 19, 44, 29, 17, 45, 39, 29, 18, 43,
45, 39, 24, 44, 26, 34, 20, 35, 30, 36

Standard Score or Z-Score

- The _____ that a given value x is _____
 - A measure of _____ compared to the mean
 - Whenever a data value is less than the mean, its corresponding z score is _____
 - Whenever a data value is greater than the mean, its corresponding z score is _____
 - EX: z score = -2
 - EX: z score = 3
- Formula:

- Unusual:

- Z scores _____

- Usual/Ordinary:

- Z score is between(or equal to) _____

EX: Comparing Z scores

- The table shows the means heights and the standard deviations for a population of men and a population of women. Compare the z-scores for a 6 foot tall man and a 6 foot tall woman.

| Men's Heights | Women's Heights |
|----------------------|------------------------|
| Mean = 69.9 in. | Mean = 64.3 in. |
| SD = 3 in. | SD = 2.6 in. |
